DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on September 9, 2004 is acknowledged. The references listed therein have been considered.
2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

In particular, Japanese Patent Application 2-234048 on page 1, line 13 and Japanese Patent Application 4-297854 on page 2, line 20 have not been considered.

Specification

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-4 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. These claims were examined in accordance with the guidelines for statutory subject matter published 22 November 2005 at 1300 OG 142.

Claim 1 specifies a method to determine a physical quantity of an inhomogeneous medium. However, Claim 1 does not result in a physical transformation nor does it appear to provide a useful, concrete and tangible result. Specifically, it does not appear to produce a tangible result because merely calculating a target physical quantity by an algebraic operation is nothing more than a computation within a processor. It fails to use or make available for use the result of the determination to enable its functionality and usefulness to be realized. Additionally, a practical application is not explicitly recited in the claims nor does it flow inherently therefrom. Therefore, Claim 1 appears non-statutory.

Claims 2-4 further limit Claim 1 but also do not specifically or inherently produce tangible results from the method steps.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mizushima et al. (US Patent Application Publication 2002/0082504) discloses an optical analysis method for an inhomogeneous medium.
